## *Insect-a-clear* Fly Shield

The Insect-a-clear FLY-SHIELD range comprises of three models, the FLY-SHIELD 1, 2 and 4. It is the ideal alternative to conventional high voltage machines. Models 1 and 2 are suitable for front of house flying insect control where discreet management is required. The Model 4 is suitable for larger areas where suspending the machine gives a massive 360 sq meter approx. coverage. The flying insects are attracted to the special ultra violet light that is irresistible to flying insects. Once attracted into the FLY-SHIELD they will come to rest on a special adhesive coated glue board and become permanently captured. Once the board is full it can quickly and easily be replaced. Once removed, monitoring by a pest controller or hygiene manager is easily undertaken.

The following features are incorporated on the Insect-a-clear FLY-SHIELD:

- The FLY-SHIELD 1 “coverage of 90 m<sup>2</sup>, size of 345x250x115 mm” & 2 “coverage of 180 m<sup>2</sup>, size of 585x250x140 mm” can be wall mounted or suspended
- The FLY-SHIELD 4 “coverage of 360 m<sup>2</sup>, size of 650x470x140 mm” can only be suspended
- All stainless steel construction.
- Easy servicing, just remove lift off the shield for easy glue board replacement.
- Board life up to 3 months depending on environmental conditions and infestation.
- Shatter resistant tube option available.
- Plastic fly killers can degrade and become brittle due to the effect of the ultra violet light. This model, being all steel, is unaffected by this.

Conforms BS EN 60598-1 1993 and the European EMC directive. Full 2 year guarantee (except tubes).
