## *Insect-a-clear* Lantern

This professional interior/exterior insect control Lantern has been designed, developed and manufactured in the UK by one of Europe's largest insect control specialists – Insect-a-clear.

This heavy duty Lantern is not a gimmick. It has been designed for situations where flying insects (wasps, blowflies, mosquitoes etc) are causing an unhygienic nuisance.

Professional electric grid fly killers rely on 4 important factors:

- 1) A powerful high tension transformer that will destroy any insect that hits the killing grid, even in high infestation areas, year after year.
- 2) An all steel or stainless steel construction. It is more hygienic, longer lasting but most importantly it is not affected by the U.V. light source, which is known to destroy plastics.
- 3) The high intensity Ultra Violet lamp. This is the bait that lures the unwanted, disease carrying flying insects to the killing grid. Insect-a-clear have selected leading lamp manufacturer SYLVANIA's Energy Saver 18w to perform this important function.
- 4) Safety. The access guard is fully interlocked (if the unit has not been disconnected from the mains supply and the front guard is removed, the power is cut off automatically). The Lantern has been independently tested and approved to European standards and is water resistant (rated to IPX4).
