

***PROBLEMS WITH BIRDS?***  
***WE have the SOLUTIONS***

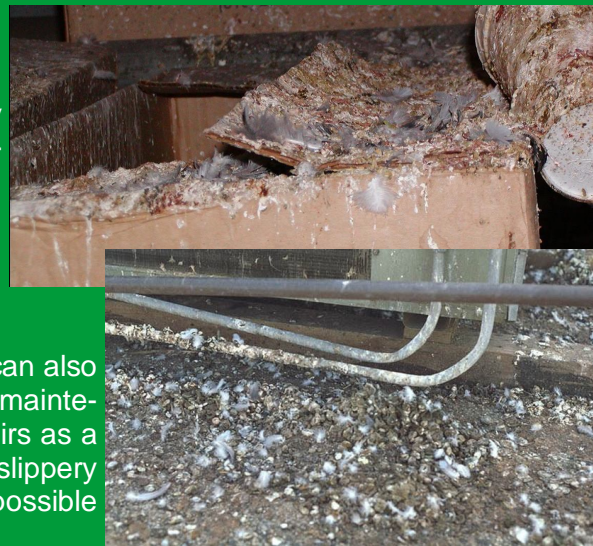

## We Understand

*Feral Pigeons* will at times live in close proximity to man. They will live, breed and feed, in filthy disease ridden environments. Due to their dirty habits, *Feral Pigeons* can be responsible for the spread of serious diseases through many routes such as;

- *Excrement directly contaminating our food and water.*
- *Breathing in airborne particles of diseased feces dust.*
- *Droppings finding their way into open wounds or cuts.*
- *Parasitic infestations that are often associated with pest birds.*

Not only is the build up of bird fouling on our properties unsightly, but it can also corrode masonry and paint work, which will lead to costly repair and maintenance. Costly repair to blocked guttering and drains and attributed repairs as a result of pigeons can be astronomical. Bird fouling can also be very slippery when wet, which could lead to personal injury, poor public relations and possible litigation.

## BIRD CONTROL SOLUTIONS

Available Through 

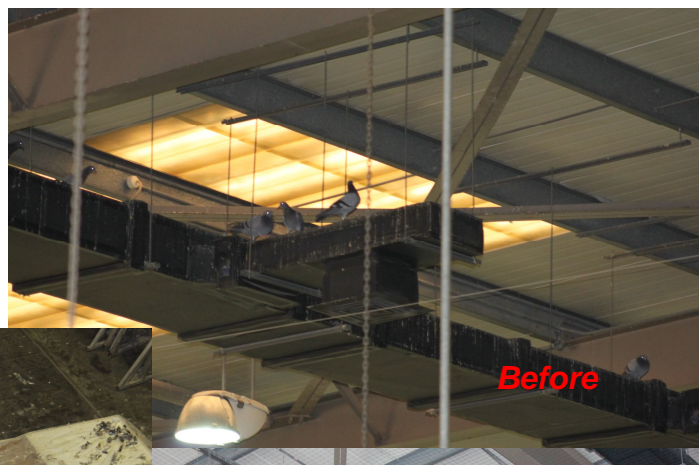

has extensive experience in providing a range of professional non-harmful bird control solutions to cater for a variety of situations. Depending on the type of bird issue, property and budget, we will present the most suitable control solution for your situation.

### *Bird Spike*

This is a professional specialized physical deterrent system designed to repel pigeons from landing or perching on building ledges. The system incorporates BS316 stainless steel wires fixed on a UV light stabilized PVC base.

### *Bird Net*

This is a widely used, non-harmful, professional net proofing system with a long history of effectiveness in many situations on buildings against all species of birds. It incorporates a UV stabilized knotted polythene net with gauges ranging from 19 mm to 75mm mesh. The net is professionally fixed to a framework of steel guide wires that are designed to follow the architectural lines of the building in order help the system remain effective, discrete and durable. Maintenance access zips can also be fixed to the net where access points are required, such as below lights, security cameras or AC units. Fixings can be supplied in stainless steel or galvanized steel, depending on the building structure nets can be supplied in a range of colors to suite building design needs.

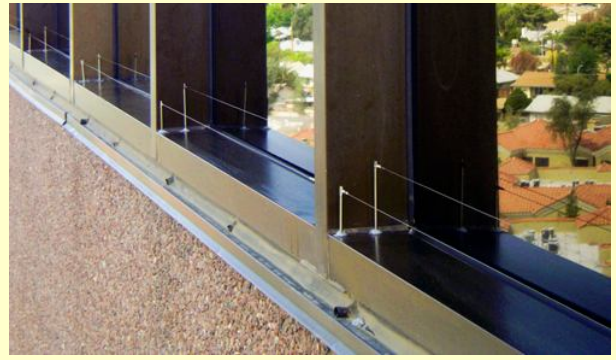

\* Totally effective—Totally discreet

## Bird Wire

This is a professional low visibility physical deterrent system designed to repel pigeons from landing or perching on building ledges. The system incorporates stainless steel sprung wires installed to vertical stainless steel posts or wall fixing pins.

## Bird Mist

This is a non harmful discrete control solution for nearly all situations and against all bird species, on, in or away from buildings. Control is achieved through a non harmful chemical mist regularly applied to the area through a special misting machine. The mist particles are breathed in by the bird, which irritates its throat and lungs. After several exposures to the mist the bird soon associates the area with discomfort and will go else where.

The system and chemical mist is very discrete and non harmful to birds and humans. Humans are not irritated by the mist chemical which has a slight sweat odor. This system can be used in warehouses, out door dining areas, villas, palaces, aircraft hangers, factories and any where birds need to be controlled. The chemical derives from grape juice, is regularly used as a food additive, and is fully approved by the Ministry of Environment & Water.

## Bird Shock

This is a non harmful discrete permanent control solution that's effective against all bird species and infestation levels on all buildings. Specialized flexible electrical tracks are fixed along bird activity areas. Once birds come in to contact with the electrical track they receive a small non harmful shock, fly away and never return. Depending on the building color a range of electrical track colors are available.

## Bird Catch

 uses a range of modern and humane trapping techniques to catch birds with in buildings. Trapped birds are then released away from the building. These services could range form a one off to a regular contract depending on the issue being faced.

 has extensive experience in controlling birds in many situations.

We have a range of professional non harmful control systems for controlling birds in;

Warehouses

Outside dinning

Theme parks

Aircraft hangers

Palaces

Villas

Hotels

Commercial & Residential towers

Hospitals

Schools

Factories

Airports & other type of properties

Like with all our pest control solutions,  follows an integrated approach. Our Technical Bird Control Surveyor will also provide you reasons why birds may be attracted to you building and will provide you with other supportive recommended solutions that will help you achieve long term control. This could be recommendations for building proofing, landscape modification, waste management practices, storing of goods and so on.

Our Bird Control Proposals will be very clear and specific to ensure all expectations are fully met and to provide full piece of mind.

Call us now for a survey & consultation by a trained bird surveyor with a full proposal to control your bird issue!
